Järnvägstillämpningar – Hjälpkraftsystem i rälsfordon

*Railway applications –
Onboard auxiliary power converter systems
(CLC/TS 50535:2010)*

Nationellt förord

En teknisk specifikation, TS, utarbetad inom CENELEC är avsedd att ge beskrivningar som kan stödja den inre marknadens utveckling, ge vägledning beträffande specifikationer eller provningsmetoder eller ge specifikationer för teknikområden under snabb utveckling. Ett förslag till europeisk standard, EN, som det inte varit möjligt att nå tillräcklig enighet kring, kan också fastställas som TS, för att användas på försök (som förstandard) och för att efter eventuella justeringar eller bearbetningar senare fastställas som EN. En teknisk specifikation har en giltighetstid som är begränsad till tre år, med möjlighet till förlängning med tre eller högst sex år.

ICS 45.060.01

Standarder underlättar utvecklingen och höjer elsäkerheten

Det finns många fördelar med att ha gemensamma tekniska regler för bl a säkerhet, prestanda, dokumentation, utförande och skötsel av elprodukter, elanläggningar och metoder. Genom att utforma sådana standarder blir säkerhetskraven tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

SEK är Sveriges röst i standardiseringssarbetet inom elområdet

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

Stora delar av arbetet sker internationellt

Utdriften av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringssarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringssverksamhet och medlemsavgift till IEC och CENELEC.

Var med och påverka!

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtidens standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

Foreword

This Technical Specification was prepared by SC 9XB, Electromechanical material on board rolling stock, of Technical Committee CENELEC TC 9X, Electrical and electronic applications for railways.

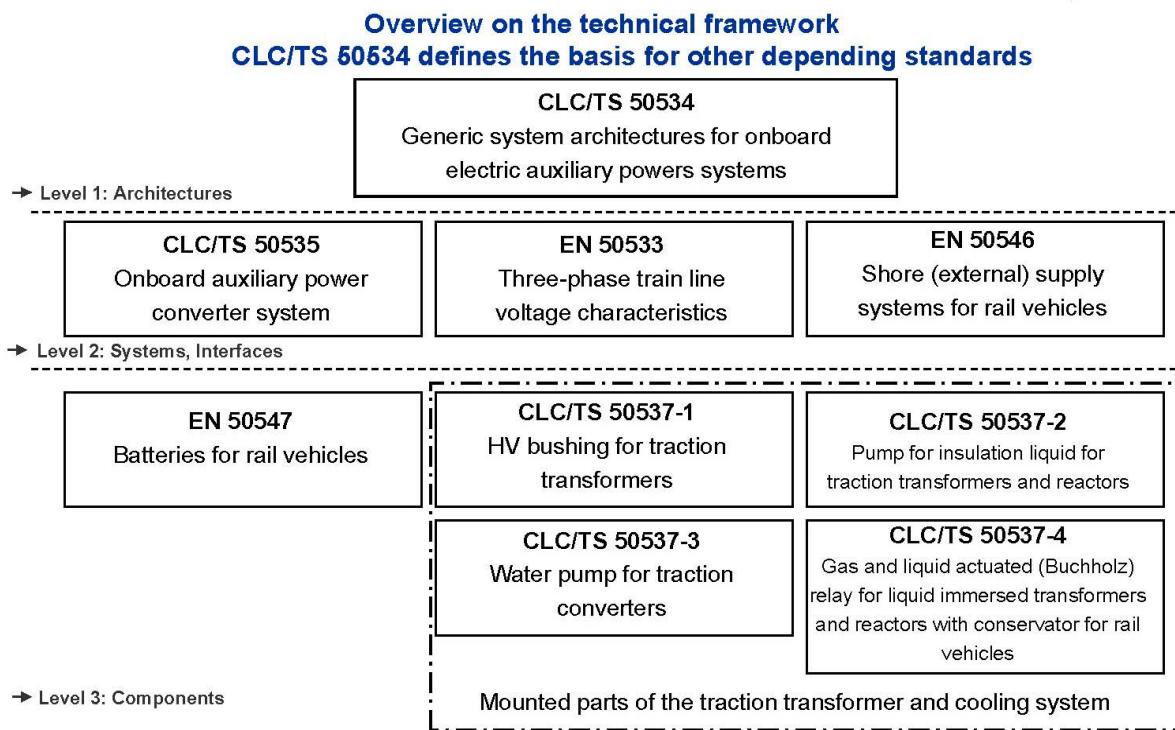

It was circulated for voting in accordance with the Internal Regulations, Part 2, Subclause 11.3.3.3 and was accepted as a CENELEC Technical Specification on 2010-03-26.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN and CENELEC shall not be held responsible for identifying any or all such patent rights.

The following date was fixed:

- latest date by which the existence of the CLC/TS has to be announced at national level (doa) 2010-06-26

This standardization project was derived from the EU-funded Research project MODTRAIN (MODPOWER). It is part of a series of standards, referring to each other. The hierarchy of the standards is intended to be as follows:

Annexes defined to be normative belong to the content of this Technical Specification; annexes defined as informative are used only for information.

Annex A is normative and Annexes B, C and D are informative.

Introduction

This Technical Specification defines characteristics and interfaces for electric onboard auxiliary power converter systems. This includes auxiliary power converters and battery chargers. The following European Standards and Technical Specifications refer to the defined target energy supply system in this present Technical Specification:

CLC/TS 50534	Railway applications – Generic system architectures for onboard electric auxiliary power systems <i>(Characteristics and interface of generic system architectures for onboard electric auxiliary power systems)</i>
EN 50533 1)	Railway applications – Three-phase train line voltage characteristics <i>(Characteristics of the voltage system used for auxiliary power supply)</i>
EN 50546 2)	Railway applications – Shore (external) supply system for rail vehicles <i>(Interface description of the shore supply including protection functions)</i>
EN 50547 2)	Railway applications – Batteries for rail vehicles <i>(Standardized batteries for rail vehicles and charging characteristics)</i>
CLC/TS 50537 (series)	Railway applications – Mounted parts of the traction transformer and cooling system <i>(Standardized products used in conjunction with traction transformers and traction cooling systems)</i>

CLC/TS 50535 has to be understood as a basic document of a set of hierarchically structured specifications as illustrated in the foreword. This set of European Standards and Technical Specifications defines a consistent technical framework beginning on an architectural level, followed by standards belonging to important system interfaces and concluding this hierarchy with Technical Specifications on component level. The diagram in the foreword points up these different system integration levels and shows the dependencies between the documents.

One main objective of this standardisation initiative is to simplify the cooperation between concerned railway stakeholders in charge of operating onboard auxiliary power systems, designing systems able to cope with the operational requirements and stakeholders manufacturing auxiliary power system components, which provide the requested services.

1) At draft stage.

2) Under development.

1 Scope

This Technical Specification defines the classification of the electric onboard auxiliary power converter system and defines its basic characteristics and interfaces. The onboard auxiliary power converter system consists of the auxiliary converter and the battery charger function.

This Technical Specification applies to locomotive hauled passenger trains and electric multiple units with distributed power as well as trains with concentrated power heads. Relevant train configuration and concerned energy supply subsystems are defined in CLC/TS 50534. This Technical Specification provides a technical base for implementation of onboard auxiliary power systems on different trains.

The objective of this specification is to define the required interfaces and characteristics of the onboard auxiliary power converter system in order to enable further standardisation:

- interface between onboard auxiliary power converter system and onboard traction power system;
- interface of the onboard auxiliary power supply system to the low voltage grid and to a shore supply (stationary workshop supply or external supply);
- interfaces of the auxiliary converter and the battery charger;
- characteristics of the onboard auxiliary power converter system.

The electrical operational behaviour is defined by requirements. Requirements for the type tests as well as the routine test are referred.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
